

Document Analyzer

Sold throughout the USA and the EU

Accurately and quickly parses legal type documents (e.g. RFPs) into a Requirements Compliance Matrix segments and sentences enabling the assignment of sections to the proposal teams, validation that each requirement has been responded to and assists in any bid / no bid decision process.

Using a sophisticated and mature parser engine, Atebion's Document Analyzer uses the document's numeration to identify the client's requirements whilst searching for and reporting on configurable keywords (such as "shall", "must", "should", etc). Users can then write notes for individual segments/sentences, compare between documents versions, search and filter results, summarize the requirements and export analysis results to Excel, MS Word and HTML files.

Atebion's legal document parser engine which is embedded in the Document Analyzer is a 3rd Generation engine, with a much faster and more accurate parser engine based on lessons learned from the previous parser engines.

New: Deep Analysis, Flesch-Kincaid readability checker and Atebion Tools.

Benefits

- Get relief from the tedious process of building a Compliance Matrix
- Significantly reduces the time (hours & days) building a Compliance Matrix within a few min.s
- Isolate requirements in a large Request for Proposals
- Review Contracts and Agreements
- Reads multiple document formats (PDF, DOC, DOCX, RTF, and TXT)
- Maintain virtually unlimited keyword and keyword phrases dictionaries to customize analyses for specific markets or subject matter
- Analysis results are exportable in tabular format as XLSX, DOCX, or HTML files
- Has a note pad for user's ad-hoc notes
- User friendly with an intuitive user interface
- Runs within your own secure environment
